About Environmental Advocates Action

Environmental Advocates Action was formed in 1969 as one of the first organizations in the nation to advocate for the future of a state's environment and the health of its citizens. As the environmental conscience of New York, Environmental Advocates Action through its advocacy, watchdogging, coalition building, education, and policy expertise, has been ensuring that environmental laws are enacted and enforced, anti-environmental laws are defeated, and the public participation in environmental policy debate occurs in a meaningful way. Environmental Advocates Action is a non-profit corporation tax exempt under section 501(c)(4) of the Internal Revenue Code. Visit us online: You can access past editions of the Scorecard for the complete environmental voting record of every member of the New York State Assembly and Senate. Visit www.eaaction.org to get started.

Why we do this

Every New Yorker—no matter the color of their skin, or how much money they have, or where they live—has the **right** to clean air, clean water, and an environment that is healthy. This is our fundamental belief as well as the belief of millions of fellow New Yorkers. It is our *raison d'être*, our animating principle. It is quite simply why we do what we do.

This year saw the New York State Legislature again passing important environmental legislation that follows this principle. Today, we have a law that will ensure a smooth and orderly process to fully electrify all vehicles in the state. And a bill that helps us know what's in our drinking water now awaits the Governor's signature. This year's budget invested \$300 million for the Environmental Protection Fund, \$500 million to help build the next generation of water infrastructure and included a \$3 billion environmental bond act measure that will appear on the 2022 ballot. Before this bond act is presented to voters, the funding level could increase. With each passing day, the Governor and the Legislature are seeing first-hand the need to fund efforts to tackle the climate crisis.

But perhaps the most significant piece of environmental legislation passed this year is the measure to amend the New York State Constitution by adding these fifteen powerful words: "Each person shall have a **right** to clean air and water, and a healthful environment." Our core belief.

Clean air, clean water, and a healthful environment should be viewed as inalienable **rights**. And the only way to ensure that New Yorkers expressly have those **rights** is by making sure they are included in the State Constitution.

This fall, New York voters will find a question on the ballot: should the amendment to add environmental **rights** to the constitution be approved?

The Scorecard exists to inform New Yorkers of their State Legislator's environmental voting record. This information is a powerful tool when going to the voting booth. You can see for yourself which legislators think clean air and water is a fundamental **right** and which do not. Now that they have voted, it's our turn. This election, we all have the power to decide if New York will add a **right** to clean water, clean air, and a healthful environment. This election you can vote to give yourself, your family, your neighbors—both today and for generations to come—those **rights**. This election day, earn a perfect score and vote yes for Environmental Rights.

2021 Legislative Session

Like 2019, the 2021 Legislative session began by welcoming yet another diverse freshman class of law makers from the Bronx to Buffalo, many of whom campaigned on environmental commitments to address climate change, to improve air quality in their communities, and to reverse environmental injustices. Joining long standing environmental champions, we saw an energized group of legislators taking bold actions that will improve the health and well-being of all New Yorkers.

The session featured another strong environmental budget with The Legislature authorizing a \$3 billion Bond Act for the 2022 ballot, an additional \$500 million in water infrastructure funding, and another \$300 million into the Environmental Protection Fund. Environmental Conservation Chairs Todd Kaminsky and Steve Englebright led on defining categories of environmental funding in the Bond Act, while long time clean water supporter Assemblymember Steven Otis helped secure water infrastructure funding.

As session progressed, the Senate, under the leadership of Majority Leader Andrea Stewart-Cousins, focused on climate and environmental justice, while the Assembly, under the leadership of Speaker Carl Heastie, moved to hold the administration accountable for implementation of Climate Leadership and Community Protection Act (CLCPA or climate law) in an equitable manner through climate oversight hearings.

Assemblymembers Kelles, Septimo, Gonzalez-Rojas, and Lunsford rose to the occasion during the oversight hearings by directing NYSERDA and DEC to make the Climate Action Council to be transparent with the public. These Assemblymembers held agencies accountable to the process of reducing emissions in alignment with the State's equity goals by probing commissioners about critical milestones in the implementation process.

Rising environmental stars and champions

Environmental rights champs

Assemblymember Steve Englebright (left) and Senator Robert Jackson (right)

Assemblymember Englebright and Senator Jackson channeled their decades of passion to ensure their respective house gave second passage to their bill (A.1368/S.528) to amend the State Constitution to provide a right to clean air, clean water, and a healthful environment. With passage secured, the question is now presented for voter ratification this fall.

Bringing the environmental rights amendment up for a vote early on in session allowed newly elected members to articulate their views on the environment and what environmental rights means for their communities. Members from Brooklyn to the Adirondacks to Rochester spoke out in support. Another champ to recognize is Assemblyman Richard Gottfried, long-time chair of the health committee. He has been a long time co-prime on this bill and has led the effort to connect the need for clean water (see more below) and air to healthy people.

Rising Stars

Senator Hinchey (D-Hudson Valley), Senator May (D-Syracuse), Assemblymember Septimo (D-Bronx), Assemblymember Souffrant Forrest (D-Brooklyn), Assemblymember Lunsford (D-Rochester), Assemblymember Anderson (D-Queens), Assemblymember Gallagher (D-Brooklyn), Assemblymember Burdick (D-Westchester), Assemblymember Kelles (D-Ithaca) and Assemblymember Simpson (R-Horicon) all gave remarks that sets the tone of what we can expect of these environmental champs.

From Left to right: Senator Michelle Hinchey, Senator Rachel May, Assemblymember Amanda Septimo, Assemblymember Phara Souffrant Forrest, and Assemblymember Jen Lunsford

EV Stars

Assemblymember Steve Englebright (left) and Senator Peter Harckham (right)

Assemblymember Englebright (D-Long Island) and Senator Harckham (D-Westchester/Hudson Valley) sponsored A.4302/S.2758 that, thanks to the swift action of Governor Hochul is now law. This new law essentially puts an “expiration date” for internal combustion engines for a range of uses, including passenger vehicles, trucks,

buses, farm and construction vehicles and engines and even lawn and garden equipment. The centerpiece of the new law is that all passenger cars and trucks sold or leased in New York be zero-emissions by 2035, addressing the largest climate and air pollution source in New York State. In addition, Assemblymember Cusick (D-Staten Island) and Senator Kennedy (D-Buffalo) championed an important bill (A.3876/S.3929) to fix a charging rate design that in many instances makes owning and operating fast charging facilities cost prohibitive.

Central NY duo

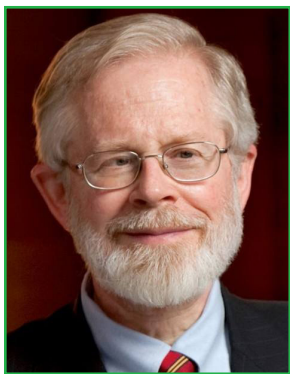

Assemblymember Anna Kelles (left) and Senator Rachel May (right)

Assemblymember Kelles (D-Ithaca) and Senator May (D-Syracuse), an environmentally minded duo from Central New York, partnered on two pieces of legislation that will play an important role in achieving the states' climate goals. The first bill (A.7611A/S.6268A) requires any funds generated through the Regional Greenhouse Gas Initiative (RGGI) be used in a manner consistent with the RGGI spending rules promulgated by NYSERDA, while A.7768A/S.7006A prohibits dormant facilities with

permits issued prior to 2012 from utilizing fossil fuels for electricity production without the issuance of new operating certificates. The latter bill would corral the explosive growth of energy intensive crypto currency. While these bills moved through committee and one passed the Assembly, we hope to see these pass in the next session. If we are to have any hope of achieving our climate and equity goals, then we cannot raid clean energy funds for general budget matters and we cannot allow retired facilities to come back online and pollute at greater levels than before.

Testing for toxics

Assemblymember
Richard Gottfried

Assembly Health Committee Chair Gottfried (D-Manhattan) and Senator Skoufis (D-Hudson Valley) secured legislative passage of their bill (A.126A/S.1759A) to establish the most comprehensive monitoring program for toxic PFAS chemicals in the nation. This “three-tree” rated bill will fulfill the promise made to New Yorkers more than four years ago to expand drinking water testing following water crises in Hoosick Falls and elsewhere. The bill will give New Yorkers critical information about the prevalence of PFAS in our drinking water and will inform future policies to protect public health from these “forever chemicals.” It awaits a signature from the Governor.

Cleaning up the air

Assemblymember Septimo (D-Bronx) and Senator Biaggi (D-Bronx/Westchester) knowing a thing or two about how poor air quality impacts communities, advanced legislation aimed at cleaning up air pollution in disadvantaged communities. A.6177A/S.841A requires all above ground petroleum bulk storage facilities to be painted white or beige/cream to reduce the release of harmful volatile organic compounds that evaporate as the tanks absorb sunlight. A.6150/S.4371B establishes ambient air quality standards for toxic air contaminants emitted by major stationary sources of air pollution, a fence line air monitoring program and penalties for violations of the standards to be paid into a community benefit fund to deliver direct benefits to environmental justice communities. While the painting bulk storage tanks bill awaits the Governor’s signature, we hope to secure passage of the ambient air quality standards legislation next session.

Senator Alessandra Biaggi

Getting the lead out

Senator J. Gustavo Rivera

Assemblymember Gottfried (D-Manhattan) and Senator Rivera (D-Bronx), respective chairs of the Assembly and Senate Committees on Health, sponsored important legislation to expand potable water testing in schools. Specifically, A.160B/S.2122A strengthens testing requirements for lead in school drinking water, an ever-critical health protection since young children are at the highest risk of life-long damage from lead.

Oil Slick Award: Senate Minority Leader Robert Ortt (R-62 Lockport)

Few in the Legislature have been as consistently bad on the environment as Senator Robert Ortt. Just this year he voted against New Yorkers having the right to clean air, clean water, and a healthful environment; expanding drinking water testing; and reducing air pollution that sickens people (including his constituents) and causes premature deaths. Over his career, he has voted against a panoply of common-sense environmental protections, including a law that currently protects kids from dangerous chemicals in toys.

Senator Ortt's antipathy toward the environment goes well beyond voting NO on legislation. From his Don Quixotesque problem with windmills and wind power to fighting to keep coal plants open to leading what the Albany Times Union called a "disinformation campaign" against the Climate and Community Investment Act (a measure that would fund New York's fight against the climate crisis), Senator Ortt can be trusted to tow the line for big polluters and stand against the improved health of New Yorkers.

A key feature of leadership is providing direction, and it's clear that Senator Ortt's leadership of the Senate Minority Conference is directing them straight off an environmental cliff. Every Senator in the minority must decide if they want a leader representing them that has this poor of a record on the environment and if this anti-environment ethos is what they want to be known for.

For his damaging and dismal environmental voting record since he has been in office, for his dangerous leadership of the Senate Minority Conference, and for being as out of touch as you can get, Senator Robert Ortt is our 2021 Oil Slick Award recipient.

'21—37% Voted against New Yorkers having a right to clean air, water

'20—23% Voted against banning toxic coal tar

'19—49% Voted against New York's historic climate law

'18—68% Voted to divert clean energy funds

'17—53% Voted against the Clean Water Bond Act

'16—57% Voted to stall clean energy spending

How Scores Are Calculated

To calculate legislators' scores, Environmental Advocates Action uses ratings developed by our sister organization, Environmental Advocates NY.

Legislators earn between 1 and 3 points respectively for votes in support of bills rated by Environmental Advocates NY as 1, 2, or 3 "tree" bills. Tree-rated bills are those that will benefit the environment.

Legislators earn between 1 and 3 points respectively for votes against bills that are given a rating of 1, 2, or 3 "smokestacks." Smokestack-rated bills are those that will harm the environment.

Incompletes: Legislators who miss more than 20 percent of votes receive a score of incomplete (INC).

What You Can Do Now That You Know the Score

Find out who represents you.

Visit www.assembly.state.ny.us and www.nysenate.gov or call the New York State Assembly at (518) 455-4100 and the New York State Senate at (518) 455-2800.

Vote at the local, state, & federal levels.

Your vote is critical when it comes to whether or not New York State protects the air we breathe, the water we drink, and the health of our families.

Contact your lawmakers.

Write to your legislators at New York State Assembly, Albany, NY 12248 or New York State Senate, Albany, NY 12247.

Hold legislators accountable.

If they voted to weaken New York's environmental safeguards, send lawmakers a note expressing your disapproval. If your legislators are working to protect New York's environment, write to thank them.

Support our work.

Visit www.eaaction.org to support our work in the State Capitol. You can also find us online on Twitter: [@EA_Action](https://twitter.com/EA_Action) or Facebook: [@EnvironmentalAdvocatesAction](https://www.facebook.com/EnvironmentalAdvocatesAction).

Bill Summaries

To score legislation, Environmental Advocates Action uses ratings developed by our sister organization, Environmental Advocates NY.

Bills with 3 trees will bring major benefits to New York's environment.

Bills with 2 trees will bring substantial benefits to New York's environment.

Bills with 1 tree will benefit New York's environment.

Bills with 1 smokestack will be detrimental to New York's environment.

Bills with 2 smokestacks will be seriously detrimental to New York's environment.

Bills with 3 smokestacks would likely result in major or lasting harm to some aspect of New York's environment.

Please note: no smokestack bills were voted on by the Legislature this year.

🌳🌳🌳 1. Environmental Bill of Rights

This bill proposes an amendment to the Bill of Rights of the New York State Constitution providing a right to clean water, clean air, and a healthful environment for all New Yorkers. This bill was passed by two consecutive legislatures (once in 2019 and again in 2021) and now the New York electorate will be able to vote by ballot referendum to add this right to the state constitution in November 2021. If approved, these rights would be given the same protections as our rights to free speech, freedom of religion, due process, and property. Establishing constitutional environmental rights for all New Yorkers ensures a strong legal foundation exists to sustain healthy lives and economies for current and future generations. A.1368 (Englebright)/S.528 (Jackson) passed both the Assembly and the Senate and will be on the ballot for voters to decide in November 2021.

🌳🌳🌳 3. Expanding Drinking Water Testing

This bill ensures that all public water systems across the state test for potentially dangerous chemicals so that every New Yorker knows what is in their water. The bill creates New York's first emerging contaminant testing list drawn from EPA's latest round of emerging contaminant testing. This bill will ensure all water utility systems,

including small water systems serving fewer than 10,000 people, test for the listed contaminants. This bill is critical for ensuring New Yorkers know their drinking water is free from dangerous chemicals. A.126-A (Gottfried)/S.1759-A (Skoufis) passed the Assembly and the Senate.

🌳 4. Pesticide Free Summer Camps

This bill extends protections for children against harmful pesticides at children's camps by prohibiting pesticides on camp playing fields, playgrounds, and turfs, which are areas where children spend significant time during their summers. Pesticides are highly toxic and can contaminate the air and drinking water, posing health risks to children. This bill will protect children from contact with pesticides by restricting the usage of pesticides at all New York summer camps. A.528-A (Paulin)/S.4478-A (Brouk) passed both the Assembly and Senate.

🌳🌳 5. Keep Water On

This legislation prohibited utility shutoffs during the COVID-19 state of emergency. Water shutoffs are a standard practice that many utilities employ when households do not pay their water bills on time. As a result, human health and community well-being are put at risk, especially during a public health crisis in which every New Yorker should have access to running water. This legislation protected against utility termination for 180 days after the state of emergency terminated, including the prohibition of late fees, and guarantees access to defer or extend repayment plans. A.6255-A (Richardson)/S.1453-B (Parker) passed both the Assembly and Senate and was signed into law by the Governor.

🌳 6. Addressing Asthma in Communities of Color

This bill establishes a Minority Coordinating Council on Asthmatic Affairs within the Department of Health. This council will assess asthma risk factors for residents of color within the state, identify barriers to treatment, develop intervention strategies, and create an awareness campaign to manage asthma rates in communities of color through prevention and treatment. This bill will help to address the long-standing environmental justice issue of disproportionate asthma rates among communities of color due to higher rates of air pollution. A.5828 (Reyes)/S.410-A (Biaggi) passed the Assembly.

7. Getting the Lead Out of Schools

This bill amends the public health law to expand potable water testing in schools to protect students from school drinking water that may be contaminated with lead. Lead is a neurotoxin that causes neurological damage, impaired hearing, slowed growth, and anemia, even when exposed to trace amounts. Lead in drinking water must be monitored to protect children who have the highest risk for health problems. This bill will lower the lead action level from 15 ppb to 5ppb, which will ensure that more water sources contaminated with lead are remediated in New York schools. A.160-B (Gottfried)/S.2122-A (Rivera) passed both the Assembly and Senate.

8. Travel Without Plastic

This bill amends the environmental conservation law to restrict hotels from making personal care products in small plastic bottles available to hotel guests. It will take effect January 1, 2024, for all hotels with fifty rooms or more, and January 1, 2025, for all hotels with less than fifty rooms. This bill will prohibit single use plastic in hotels to help address the single-use plastic waste crisis. Encouraging hotels to use bulk dispensers of personal care products reduces the demand for virgin materials, like petroleum, used to produce plastic. A.5082 (Englebright)/S.543 (Kaminsky) passed both the Assembly and Senate.

9. Banning Fracking Waste on Highways

This bill amends the environmental conservation law to prohibit the use of drilling fluids, brine, and flowback water from wells, pools, or fields on any highway. This fracking waste is known to contain carcinogenic and radioactive material such as radium-226, radium-228, and radon. This bill is essential to ensure these chemicals do not enter our groundwater, wetlands, and marshes, which can contaminate drinking water and natural environments. A.903 (O'Donnell)/S.355 (Hoylman) passed both the Assembly and Senate.

10. Solar Choice for Homeowners

This bill adds the "Solar Rights Act" to the real property law which prohibits homeowners' associations from adopting or enforcing any rules or regulations that would effectively prohibit or impose unreasonable limitations on the installation or use of a solar power system. This bill is important to ensuring homeowners associations don't interfere with homeowners' ability to install solar panels. Allowing homeowners to choose solar helps

New York State meet emission reduction goals. A.1933 (Galef)/S.2997 (Parker) passed both the Assembly and Senate and was signed into law by the Governor.

12. Enforcement Tools

This bill expands the civil remedies available for environmental conservation law violations when there is no specific penalty stated in law to include injunctive relief, a remedy to restrain the person from continuing the harmful action. This bill would give DEC more flexibility in enforcing against breaches of the environmental conservation law and allows for more appropriately tailored enforcement tools. S.1237 (Gianaris) passed the Senate and does not have a sponsor in the Assembly.

13. Low-Cost Air Pollution Reduction

This bill requires all petroleum storage tanks to be painted white, beige or cream to help reduce harmful air pollution. The petroleum products housed inside storage tanks can evaporate when heated by the sun and can release gases such as benzene, toluene, ethylbenzene, and other volatile organic compounds that have negative health impacts and form smog. This is increasingly true if the storage tanks are darker in color, absorbing more sunlight and creating more heat, and causing higher emissions. This bill will help New York reduce co-pollutants and emissions from petroleum storage tanks. A.6177-A (Septimo)/S.841-A (Biaggi) passed both the Assembly and Senate.

14. Ban on Toxic Coal Tar

This bill prohibits coal tar pavement products that have high levels of polycyclic aromatic hydrocarbons (PAHs) from being sold and used in New York. Exposure to PAHs causes a significant increase in cancer risk in children and they harm aquatic life in rivers and streams. PAHs have already been banned in various cities and states and have been advised to be banned by the American Medical Association. This bill will help keep toxic chemicals out of waterbodies. A.518-A (Rosenthal)/S.4095-B (Sanders) passed both the Assembly and Senate.

16. Fuel Oil Phaseout (#4)

This bill requires number four fuel oil to be phased out by 2027 in buildings and facilities across New York State. The burning of number four fuel oil emits toxic pollutants that cause poor air quality, and subsequently negative public health impacts.

Air pollution has been linked to heart disease, asthma attacks, lung cancer, and reduced life expectancy, with children and older individuals being especially at risk. This bill is critical to protecting public health, lowering greenhouse gas emissions, and reducing air pollution. A.5043 (Paulin)/S.2937 (Kaminsky) passed the Senate.

▲ 17. Fuel Oil Phaseout (#6)

This bill requires number six fuel oil to be phased out of building and facilities across New York State by 2023. The burning of number six fuel oil emits toxic pollutants that cause poor air quality, and subsequently negative public health impacts. Air pollution has been linked to heart disease, asthma attacks, lung cancer, and reduced life expectancy, with younger and older individuals being especially at risk. This bill is critical to protecting public health, lowering greenhouse gas emissions, and reducing air pollution. A.5029-A (Paulin)/S.2936-A (Kaminsky) passed both the Assembly and Senate.

▲ 20. Expanding the Energy Efficiency Workplace

This bill establishes an energy efficiency program for utilities to implement within environmental justice communities and requires program funds for training individuals within the communities. This bill also requires NYSERDA to implement the established energy efficiency programs in environmental justice communities. This bill will not only help reduce emissions and energy bills, but will do so in environmental justice communities, ensuring that vulnerable communities are not left behind in the transition to renewable energy. Senators were scored on S.3126-A (Parker)/A.3996-A (Hunter), which passed the Senate, but were not scored on S.3126-B (Parker)/A.3996-B (Hunter), which we did take a position on after the bill was amended to the B print.

▲▲ 21. Equitable Siting

This bill amends the State Environmental Quality Review (SEQR) Act to include measures that consider the inequitable burdens placed on environmental justice communities in large part due to industrial siting. Historically, low-income communities and communities of color have experienced higher exposure to industrial contaminants and pollution that have resulted in not just poorer water, air, and soil quality, but negative health impacts. This bill will ensure that impacts on environmental justice communities are recognized and considered in the SEQR siting process. A.2103-A (Pretlow)/S.1031-B (Stewart-Cousins) passed in the Senate.

▲ 22. Intervenor Reimbursement

This bill makes it more accessible for residential or small business customers that want to participate in Public Service Commission proceedings to have the ability to do so. The customers will have to seek active party status and demonstrate that participating in proceedings will cause them financial hardship, however this bill makes it possible for them to engage in the regulatory process by proving the opportunity for financial compensation for the burden of missing work or coordinating childcare to participate in a proceeding. A.873 (Cahill)/S.3034-A (Parker) only passed in the Senate.

▲▲ 23. Clearing the Toxic Air

This bill requires the Department of Environmental Conservation to enhance air monitoring in environmental justice communities and set air quality standards for contaminants like benzene, formaldehyde, mercury, trichloroethylene, and others. The health impacts of being exposed to these toxic air contaminants include cancer, birth defects, cardiovascular disease, brain and nervous system damage, and these pollutants disproportionately impact disadvantaged communities. This bill mandates expanded tracking and reporting of toxic air contaminants, while providing these communities with funds if polluters violate the standards. A.6150 (Septimo)/S.4371-B (Biaggi) only passed the Senate.

▲▲ 24. Peak Solutions

This bill requires peaker plants in or near environmental justice communities to create plans to transition to renewable generating facilities that must eventually replace fossil fuel-fired units. The bill will make permit renewals for peaker plants dependent on these plans being submitted within five years. This bill will reduce pollution and improve health outcomes in disadvantaged communities as that is where peaker plants are primarily located. A.6251 (Carroll)/S.4378-A (Brisport) only passed the Senate.

▲▲ 25. Expanding Public Participation

This bill establishes a process of enhanced public participation for major projects approved by the Department of Environmental Conservation that are in or near environmental justice communities. Even though industrial projects and facilities impact environmental justice communities the most, these communities have been largely excluded from the permitting process. This bill will allow for permits to be denied if the applicant does not adequately assess and resolve concerns

of environmental justice communities. A.6530 (Barnwell)/S.3211-A (Ramos) only passed the Senate.

▲ 26. Make New York EV Ready

This bill mandates that any construction projects funded by the State that includes a parking facility with 50 or more spaces must support electric vehicle charging stations. With the aggressive goals New York has set to reduce greenhouse gas emissions 85% by 2050, parking facilities must become electric vehicle ready. Encouragement of electric vehicle ownership and expanding public charging options go hand in hand and will help increase public comfort with the transition to electric vehicles. A.3486-A (O'Donnell)/S.23-A (Kaplan) only passed the Senate.

▲ 28. Expanding EV Access

This bill increases the rebate amount that municipalities can receive for purchasing electric vehicles. As municipalities and state entities work to achieve the emissions reduction goals of the CLCPA, focusing on reductions within the transportation sector is important as it is the largest source of emissions in the state. Incentivizing the purchase of electric vehicles through rebates helps make them cost competitive and more accessible to municipalities which will help New York meet the requirements of the CLCPA. A.2578 (Woerner)/S.4092 (Hinchey) only passed the Senate.

▲▲▲ 33. 100% Electric Vehicles by 2035

This legislation sets a goal for New York State to sell and lease only zero-emissions passenger vehicles and trucks by 2035. Additionally, it will set a goal for medium and heavy-duty vehicles to be zero-emission by 2045. This bill will help align state transportation policy with the emissions reduction mandates of the CLCPA and greatly improve air quality. A.4302 (Englebright)/S.2758 (Harckham) passed both the Assembly and Senate and was signed into law by the Governor.

▲ 34. Improved Pesticide Reporting

This bill modifies existing pesticide reporting laws to require the Department of Environmental Conservation's yearly report on pesticides to include data on the specific products used including active ingredients, and requires the reports filed by pesticide applicators, sellers, and manufacturers be provided electronically. This bill will help make information about pesticides more accessible to New Yorkers. A.4596

(Englebright)/S.4596 (Kaminsky) passed both the Assembly and Senate.

35. Birds and Bees Protection Act

▲▲▲ This bill bans neonicotinoid-coated corn, soybean, and wheat seeds from being sold and used in New York State. It also bans the use of neonicotinoid (neonics) on turf and ornamental plants. Neonics are insecticides that have been linked to the death of bees, birds, and fish, which could cause the agricultural sector, and subsequently the economy, in New York State to be threatened. Neonics also contaminate waterways through runoff and have been detected in groundwater samples in Long Island. This bill will prevent neonic use and protect food systems, agricultural production, and environmental sustainability. A.7429 (Englebright)/S.699-A (Hoylman) passed the Senate.

▲▲▲ 37. Carpet Recycling

This bill established an extended producer responsibility program for carpet which will help reduce waste from the carpet industry and phase out harmful chemicals from the manufacturing process. The disposal of carpeting costs taxpayers and businesses millions annually and about 515 million pounds of carpet materials get sent to New York landfills instead of being recycled. This bill will establish a program for recycling carpet in New York, which will save residents money and reduce exposure to toxic chemicals. S.5027 (Kavanagh) passed the Senate and does not have an Assembly sponsor.

▲ 39. Clean Trucks

This bill directs the Department of Environmental Conservation to develop regulations and establish targets for the sale of zero emissions medium and heavy-duty vehicles, to parallel regulations adopted by the State of California. Air pollution caused by medium and heavy-duty vehicles disproportionately impacts environmental justice communities due to the siting of depots, ports, and highways in these communities. This bill will improve public health outcomes by reducing emissions and allow New York to keep pace with California's vehicle standards. S.4097 (Parker) passed the Senate and does not have an Assembly sponsor.

▲ 40. Leading by Example: EV State Procurement

This bill requires the Office of General Services to develop and implement a state fleet procurement plan that is made up of at least

25 percent zero emission vehicles by 2025 and 50 percent by 2030. Additionally, this bill requires all passenger vehicles purchased or leased by a state agency or authority to be zero emission vehicles by 2030. This bill will help prepare the state to transition its vehicle fleets and meet targets in the timeline established by the CLCPA. A.2412-A (Fahy)/S.2838-A (Parker) only passed the Senate.

▲ **42. Electric Vehicle Charging Infrastructure**

This bill requires gas and electric utilities to file with the Public Service Commission to establish a commercial tariff for light, medium and heavy-duty electric vehicles. This will allow customers to have more reasonable charging rates for electric vehicles by modernizing the electricity rate design in each utility territory. This bill will advance the state's transition to all-electric transportation by making electric vehicle ownership more affordable. A.3876 (Cusick)/S.3929 (Kennedy) passed both the Assembly and Senate.

▲ **43. Lead-Free Parks**

▲ This bill mandates that state and local parks test for lead in drinking water once every three years, and if the state's lead action level is exceeded, the appropriate authorities must act within 90 days to remediate the contamination. Lead exposure at any level is dangerous and young children are the most at risk of neurological damage and other harmful health effects due to lead exposure. This bill will help New York State take necessary steps to ensure parks are lead-free. A.4551-A (O'Donnell)/S.1256-A (Gianaris) passed the Senate but not the Assembly.

▲ **44. Ending Toxics in Products**

This bill bans the sale of residential furniture containing intentionally added chemical flame retardants, and electronics that have added flame retardants. Flame retardants can cause cancer, disrupt hormones, and reduce IQ, all of which especially harm young children. Flame retardants do little to prevent fires, so banning flame retardants and associated chemicals will not pose a risk for New Yorkers. This bill will protect New Yorkers from health problems associated with dangerous chemicals in flame retardants. A.5418-B (Englebright)/ S.4630-B (Kaminsky) passed both the Assembly and Senate.

▲ **47. Scaling up Solar**

This bill allows for solar energy projects to be installed and operated in the parking lots of municipal parklands without the approval of

the legislature. Small scale renewable energy options, like solar, have the potential to account for a significant portion of energy generation in the coming decades because of their low installation costs and minimal maintenance requirements. This bill will help speed up the timeline of the installation of these projects and bring the State closer to the goals of the CLCPA. A.6838 (Galef)/S.2995 (Harckham) only passed the Senate.

▲ **48. Banning Emissions Tampering**

This bill makes it illegal to tamper with heavy-duty vehicles' emissions control devices and establishes fines for the offense. This bill also bans the operation of a vehicle with a defective emissions control device and imposes a fine for violations. Air pollution from the transportation sector is the largest environmental health risk in the country because of the particulate matter produced by internal combustion engines. Particulate matter can cause health impacts like heart disease and decreased lung function. This bill will ensure that pollution control devices are intact to reduce emissions which will help improve air quality in New York. S.6172 (Hoylman) passed the Senate and does not have a sponsor in the Assembly.

▲ **50. Renewables on Reforestation Areas**

This bill allows NYS to enter into lease agreements to facilitate the development of renewable energy facilities on lands acquired for reforestation purposes. This bill will allow the state to take advantage of the 600,000 acres of reforestation areas in the State, if needed, to achieve the target of 70 percent of New York's electricity needs being served by renewables by 2030. A.3874 (Cusick)/S.659 (May) passed the Senate.

▲ **51. Protecting RGGI Funds**

This bill ensures that revenues from the Regional Greenhouse Gas Initiative (RGGI) are exclusively used for programs that directly relate to emissions reduction and combatting climate change in communities across New York. This bill prohibits the transfer of RGGI dollars into the State's general fund, which has become a common practice over the years. RGGI proceeds are supposed to be used on programs that support the development of renewable energy resources, energy efficiency, job creation, and transportation electrification across New York. This bill will ensure that the funds are used as intended. A.7611-A (Kelles)/S.6268 (May) passed the Assembly.

♣♣ 53. Climate Friendly Farming

This bill establishes the Soil Health and Climate Resiliency Act to improve farm productivity and support climate friendly farming practices. Agriculture in New York accounts for 5.3 million metric tons of carbon dioxide emissions annually, while farmers also face the challenges of extreme heat, flooding, insect invasions, intensified storm events due to climate change. These effects of climate change impact soil health and crop viability. This bill will encourage farmers to engage in soil health initiatives and practice climate resilient farming so that the food supply is healthy, natural resources are protected, and climate change is mitigated. A.5386-A (Lupardo)/S.4722-A (Hinchey) passed both the Assembly and Senate.

♣ 55. Equity in Environmental Conservation Law

This bill amends the environmental conservation law by codifying the equal treatment of all people regardless of any identity, status, or orientation. Marginalized communities have been subjected to greater environmental harm due to power plants and waste sites all being disproportionately put in low income, immigrant communities, and communities of color. The highest rates of air pollution in New York are concentrated in the communities with high populations of Black and Latino residents and are among the poorest districts. This bill will make it clear that all people must be treated equally under environmental laws. S.1232 (Gianaris) passed the Senate and does not have a sponsor in the Assembly.

♣ 57. Electric Bike and Scooter Rebate

This bill establishes a ride clean rebate program to aid with the purchase of electric bicycles and scooters. The CLCPA mandates reducing greenhouse gas emissions and the transportation sector produces over a third of statewide emissions. Encouraging affordable micro-mobility options like electric bikes and scooters will improve air quality by reducing vehicle emissions and congestion and will help the State meet the goals of the CLCPA. A.516-A (Carroll)/S.3080-A (Salazar) passed the Senate.

♣♣ 59. Protecting Wetlands

This bill adds an estimated 1,000,000 acres of freshwater wetlands to the protected wetland areas that the Department of Environmental Conservation oversee in New York State. The Department of Environmental Conservation currently can only protect wetlands larger than

12.4 acres that appear on maps; however, the maps being used have not been updated in two decades and there are many wetlands that are not included. Wetlands are critical to ecosystems and public health and need to be protected from development, and this bill would allow the Department to regulate wetlands smaller than 12.4 acres if they are of particular importance. A.7850 (Englebright)/S.5116-C (Harckham) passed the Senate.

♣ 64. Education on the Impacts of Idling

This bill establishes a program that will educate the public on the environmental and health impacts of idling internal combustion engines. Vehicles that are operated by an internal combustion engine emit carbon dioxide and particulate matter 2.5 that have severe health impacts and are linked to increased rates of asthma, diabetes, and heart disease. This bill will help inform drivers of the health and environmental effects of idling when applying for or renewing a driver's license so that unnecessary pollution may be prevented. A.7722-A (McMahon)/S.6962 (Ryan) passed the Senate.

♣ 65. Right to Repair

This bill requires that electronic companies provide consumers and local repair shops with the necessary information to repair their devices. Thousands of digital devices are created by manufacturers and thrown out every year by consumers because companies withhold critical parts and tools that would allow people to fix their own electronics. This bill would help save New Yorkers billions of dollars every year by giving consumers the right and access to fix their electronics and reduce electronic waste, of which New York currently generates 655,000 tons annually. A.7006 (Fahy)/S.4104 (Breslin) only passed the Senate.

♣ 66. Stopping Invasive Species

This bill authorizes the Department of Environmental Conservation to establish inspection stations in the Adirondack Park to inspect motorized watercraft for the presence of aquatic invasive species, and requires boaters to clean, drain and dry their boats before launching. The Adirondack Park is an ecologically sensitive natural space that is susceptible to invasive water species, that can harm local fish populations, impacting outdoor recreation and local economic activity. Many aquatic invasive species have already been detected in New York, and this bill

will help contain and limit the spread of invasive aquatic species. A.7735-A (Jones)/S.7010-C (Kaminsky) passed both the Assembly and Senate.

67. Blockchain Environmental Impacts

This bill would establish a moratorium on the issuance of permits and renewal of permits for electric generating facilities that are powered by fossil fuels which are used to support blockchain transactions. This bill also directs the Department of Environmental Conservation to prepare an environmental impact statement on operations that use proof-of-work authentication methods to validate blockchain transactions. As digital currency becomes more valuable and blockchain validation methods continue to be energy intensive practices, retired powerplants in New

York are at risk of being repurposed to power these operations. This bill will ensure that these re-powered plants using dirty fossil fuels must go through the proper review and permitting processes before going online. A.7389-A (Kelles)/S.6486-B (Parker) passed the Senate.

68. Advanced Building Codes, Appliance and Equipment EE Standards

This bill aligns the state energy conservation construction code with the energy and emissions reduction standards of the climate law and increases efficiency standards of appliances and equipment. Updating the energy code is essential to reducing emissions and energy use in the building sector, and it will produce huge savings for households and businesses. A.8143 (Fahy)/S.7176 (Parker) passed the Senate.
